

2020 CANADA'S TOP GROWER AWARD

Certified organically grown cannabis from Nova Scotia's South Shore

High Seas Pre-Rolls

THC 20-25% CBD <2%

Reef's *High Seas* owes its high THC potency to its award-winning lineage. *High Seas* is the name we've given to our batches of *Ghost Train Haze* with particularly high percentages of THC. *Ghost Train Haze*, a Sativa dominant strain born from a cross between *Ghost OG* and *Nevil's Wreck*, produces dense buds that are laden with resinous, crystal trichomes. With a terpene profile that includes terpinolene, myrcene, limonene, beta-pinene and ocimene, *High Seas'* aroma is fresh, earthy and citrusy with a hint of sweet pine.

Reef's *High Seas* is grown organically in living soil in small indoor batches, free of synthetic fertilizers or pesticides. It is dried and cured in small batches for perfect moisture levels, high consistency, potency and that desired white ash and clean burn. *High Seas* is sensory tested, hand-finished, weighed and inspected before release to consumers.

Reef's pre-rolls are wrapped in non-bleached paper and are hand finished and weighed to ensure uniformity and quality.

Certified Organically Grown

How We Grow

Reef Organic cannabis is grown in small indoor batches using certified organic cultivation methods with aquaponics and aquaponic farming in living soil. Aquaponics refers to a system that combines conventional aquaculture (we use living Koi) with hydroponics (cultivating plants in water) in a symbiotic environment. We employ aquaponic farming and use the nutrient rich water from the system on organic living soil. This all-natural growing medium is free from synthetic amendments. These platforms contain natural nutrients that rely on the symbiotic relationship between microorganisms and the cannabis plant's root system. Research shows that plants grown organically are healthier and less prone to pests and disease.

The customer has the reassurance that our products have been grown without synthetic ingredients, that the living plant was grown in optimal conditions using a sustainable, organic medium. Our award-winning aquaponics system was developed by our team working with scientists and growers from around the world. The system won a *Spark Innovation Award*, and a *Clean Tech Energy Award* for ecological design elements that use up to 90% less water and 50% less energy than conventional indoor hydroponic systems.

The Organic Difference

Reef Organic's cultivation sets its products apart from most in the marketplace. Consumers of organically grown cannabis will be able to see, smell, touch and taste the difference organic practices make.

Consumers of organically grown cannabis often note the density of the bud, and how smooth and flavourful it is; its lack of harshness; and its clean burn. A premium price point that provides a premium experience. All of our products are very consistent in potency and terpene profiles batch after batch. Our dry-cure captures smoke ready moisture levels with hand finishing and pack-on-demand production environment to ensure preservation of trichomes, freshness and visual appeal.
